

Microsoft 365 Sales Agent

What it is, what it does for pitches, and whether it fits FS

Internal briefing

June 2026

Informational — no procurement ask

What this deck is — and isn't

Is:

- A factual picture of Microsoft's Sales agent in M365 Copilot
- A walk-through of the “customised pitch” workflow specifically
- An honest FS-fit assessment + our access reality

Isn't:

- A procurement ask
- A claim that Sales agent does IB-style pitchbooks (it doesn't)
- A statement on whether we already have it (depends on tenant config)

What it is

Sales agent is not the same thing as M365 Copilot

Most common misconception. Disambiguation up front:

Product	What it is	Who has it
M365 Copilot	Generic AI layer across M365 apps	Anyone with M365 Copilot licence
M365 Sales agent	Role-based add-on for sellers; connects M365 Copilot to a CRM	M365 Copilot licence + admin install + CRM

Sales agent is **not a separate licence** — but it requires **admin install** and a **CRM dependency**.

What Sales agent adds on top of M365 Copilot

Three things:

1. **CRM-grounded context** in Outlook + Teams + M365 Copilot chat
2. **Sales-specific workflows** (meeting prep, recap, account/opportunity summaries, customised pitches)
3. **Autonomous agents** (preview / early access):
 - *Lead Research and Outreach agent* (preview)
 - *Sales Development agent* (more autonomous)

Required ingredients — all four must be true

1. **Microsoft 365 Copilot licence** for the user.
2. **Sales agent app installed** in the tenant by an M365 admin.
3. **CRM connection** — Dynamics 365 Sales or Salesforce Sales Cloud (Pro+ edition).
4. **CRM tables configured** so Sales agent knows what to surface.

If any of these is missing, Sales agent either **won't appear** or **won't return useful responses**.

What Sales agent is NOT

- ✗ **Not** for users with M365 Copilot but no CRM — it literally won't function.
- ✗ **Not** available on on-premise CRM. Cloud-only.
- ✗ **Not** available in US GCC, GCC High, DoD, or any sovereign cloud. **Hard restriction.**
- ✗ **Not** an investment-banking pitchbook generator. “Pitch” here means a B2B sales pitch — a personalised slide + a Word proposal — *not* a 50-slide deal pitchbook with comps + DCF.

The “customised pitch” workflow

The headline use case — “make a customised pitch”

Microsoft documents this as a **6-step scenario**.

Caveat — set expectations

The “pitch” here is a **B2B sales pitch**: a personalised slide deck + a Word proposal, tailored to one customer.

It is **not** an IB-style transaction pitchbook. The audience is a customer being sold to, not an internal investment committee.

The 6 steps, exactly as Microsoft documents them

Step	Surface	Input	Output
1. Prepare for Discovery	Microsoft Loop	Team collaboration	Brainstormed strategies
2. Research the Company	M365 Copilot Chat	Annual report + CRM data	Customer summary
3. Review Interactions	M365 Copilot Chat	Email threads + comms	Bulleted notes + call s
4. Update Presentation	PowerPoint + Copilot	Customer details	Personalised slide
5. Summarize Meeting	Teams / Teams Rooms	Meeting recording	Recap + action items
6. Create Proposal	Word + Office Agent	Meeting info	Draft proposal

Output: **a personalised PowerPoint slide + a Word proposal**, tailored to one named customer.

How long does this actually take?

Microsoft frames each step as “minutes”. In reality:

- Known customer: **1–2 hours** for the whole workflow
- Cold customer: **3–4 hours**

The saving vs. building from scratch is real **but bounded**.

Not “a day to ten minutes”. More like **a day to half a day**.

What the pitch workflow is NOT good for

- **✗ Multi-product, multi-stakeholder** enterprise pitches where the deck needs many customer-specific slides — the workflow personalises one slide well, not a full deck.
- **✗ Quantitative analysis** — comparisons, ROI models, deal economics. Copilot in Excel does some of this, but it is not part of this workflow.
- **✗ High-design pitchbooks** where visual quality matters as much as content — Copilot generates structurally clean but visually average PPT.

Other capabilities

Group A — CRM in flow (always-on)

Sales agent surfaces CRM data wherever you already are:

Use case	Surface
Open email from a contact → Sales pane	Outlook
Search CRM without leaving Outlook	Outlook + Teams
Log activity to CRM in one click	Outlook + Teams
“What is the status of opportunity X?”	M365 Copilot chat
Pre-meeting brief (CRM history + Bing public-web context)	Teams
Meeting recap (action items, BANT, key-words, logged to CRM)	Teams

Often the highest cumulative time-saver. **Most users get more value from these than from the showier agents.**

You trigger; agent helps:

- **Summarize email thread + draft reply** — with CRM context overlaid (“Mike said X” annotated with “Mike is CFO at Contoso, opp worth \$240K, last touchpoint 3 days ago”).
- **Summarize sales meeting** — structured recap with action items, KPIs, BANT analysis, ready-to-send.
- **Update opportunity from a meeting** — suggested CRM updates (stage changes, close-date moves, competitor mentions) for approval.

Group C — Autonomous workflows (preview)

Lead Research and Outreach agent (preview):

- Researches every lead in CRM queue (CRM + web + 3rd-party data)
- Generates personalised outreach emails
- *Optional, early-access form*: sends emails, follows up, qualifies leads autonomously, hands off to humans when ready

Sales Development agent (more autonomous):

- Two-way conversations with prospects
- Qualification + meeting scheduling end-to-end
- Most-autonomous offering Microsoft has shipped for sales

For regulated FS contexts

Treat these as **forward-looking**. The audit-trail and compliance work they demand is non-trivial.

FS fit

Where Sales agent fits in FS — strong fit

FS segment	Why
Wealth mgmt / private banking distribution	Client-by-client sales motion, CRM-tracked relationships
Asset mgmt institutional distribution	Selling funds / mandates to RIAs, pensions, family offices
Commercial banking RMs	Multi-product cross-sell to corporate clients; CRM is the OS
Insurance distribution (broker / agent)	Per-customer policy structuring + renewal cycle
Capital markets sales (DCM / ECM origination)	Account-coverage workflow exists — soft fit

The common shape: **a known customer, in a CRM, with a multi-touch sales cycle.**

Where Sales agent does NOT fit in FS

FS segment	Why it doesn't fit
Investment banking advisory (M&A pitchbooks)	Sales agent's "pitch" = 1 slide + Word; IB pitchbooks = 30–50 slides of comps, DCF, precedents
Trading / market-making / execution	No "named-account sales motion"; the work is execution
Research analysts	Output is for many subscribers, not tailored proposals
Quant / strats / risk modelling	Quantitative work; no CRM-driven workflow
Risk / treasury / ALM	Internal-facing analytical work

A precise way to say it

*Sales agent fits the parts of FS where the operating system is the **CRM** and the deliverable is a **per-customer pitch or proposal**.*

*It does not fit the parts of FS where the operating system is **Excel + market data terminals** and the deliverable is an **analytical artifact**.*

In a universal bank:

- ✓ wealth, AM distribution, commercial banking, insurance distribution
- ✗ IB advisory, trading, research, quant

Our access situation

What we know about our access

We know we have: M365 Copilot.

We do NOT know: whether Sales agent is admin-installed in our tenant. The two are related but **not equivalent**.

Common scenarios:

- M365 Copilot but no CRM → Sales agent unusable.
- M365 Copilot + CRM but no admin install → Sales agent unavailable.
- M365 Copilot + CRM + install, only some users licensed → most colleagues won't see it.

Four checks to run before claiming access either way

1. Is Sales agent installed?

Look for the *Sales* pane in Outlook (sidebar) and *Sales* app in Teams (left nav).
Absent on a sample of seats → not installed.

2. What CRM do we use?

Salesforce or Dynamics 365 Sales → supportable. Proprietary / Murex client / Bloomberg AIM / internal CRM → not supported out of the box.

3. What's our cloud?

GCC, GCC High, DoD, sovereign cloud → **not supported**. EU public cloud → supported.

4. What's our subscription posture?

M365 Copilot licences are per-user. Only the subset with M365 Copilot *could* use Sales agent.

What to tell colleagues asking “can we use it today?”

Clean answer

“We have M365 Copilot, but Sales agent is a separate add-on — it requires admin install and a CRM connection (Dynamics 365 Sales or Salesforce). We need to confirm with IT whether Sales agent is enabled in the tenant and whether our CRM is one it supports.

*If both are true, the strongest fit in our context is [wealth / AM distribution / commercial banking / insurance — pick the segment]. It is **not** the right tool for IB pitchbooks or trading workflows.”*

Summary

Comparison — the alternatives for FS pitch work

Capability	M365 Copilot	M365 Sales agent	Claude FS Pitch Builder
CRM grounding	✗	✓ (D365 / SF)	✗
B2B pitch (1 slide + proposal)	Partial	✓	Partial
IB pitchbook (comps, DCF, precedents)	✗	✗	✓
Lead research + autonomous outreach	✗	✓ (preview)	✗
Meeting prep with CRM context	✗	✓	✗
Excel-deep modelling	Partial	Partial	✓
Long-context document synthesis	Limited	Limited	✓
Our office access today	✓	? verify	✗

No single tool covers every pitch shape in FS. Sales agent covers distribution / RM / wealth pitches; Claude FS covers IB advisory pitches; nothing covers both.

Recommended next steps

1. **Confirm with IT:** is Sales agent admin-installed in our tenant? (5-min email)
2. **Confirm the CRM:** which one the office uses; is it one Sales agent supports?
3. **If yes on both:** pilot the customised-pitch workflow on a real non-sensitive opportunity. Assess if output quality justifies wider rollout.
4. **If no on either:** nothing more to do. The brief documents what Sales agent is so people asking get an accurate answer.

Summary

- Sales agent is a **separate product**, not a feature of M365 Copilot. Needs licence + admin install + CRM.
- “Pitch” in Sales agent = **B2B sales pitch** (1 slide + Word proposal), not IB pitchbook.
- **Strong FS fit:** wealth, AM distribution, commercial banking, insurance.
- **Poor FS fit:** IB advisory, trading, research, quant.
- **Hard exclusions:** GCC / GCC High / DoD / sovereign clouds; on-premise CRM.
- **Our access:** **unknown** until we run the four checks with IT.

Everything in this talk is documented in the team folder:

- `01-what-it-is.md` — factual picture of the product
- `02-scope-and-use-cases.md` — four groups of use cases, including the 6-step pitch workflow
- `03-fs-fit-and-our-access.md` — the honest FS-fit assessment + checks to run
- `appendix-sources.md` — every claim, sourced to Microsoft Learn
